#EXPOFIMER2023

Introduction

EXPOFIMER, the International Renewable Energy Maintenance Fair organized by **AEMER** and **Feria de Zaragoza** returns and will be held again in Zaragoza on **March and 9, 2023**. The benchmark fair for the management of renewable assets will be consolidated by **tripling** the **supply** of equipment and services required by the wide range of **clients** in the renewable sector, who are increasingly committed to the **quality** and **availability** of their projects in the long term.

The previous edition, in December 2021, held at the Palacio de Congresos de Zaragoza, welcomed more than **2,800 professional visitors** who were able to approach and learn first-hand about the products of the 150 brands, as well as participate in the **various workshops** and **technical sessions** in which the situation of the sector was addressed in depth.

EXPOFIMER is seeking to convey with this second edition its identity hallmark, which is none other than **promoting quality** and consolidating the **viability** of renewable installations thanks to proper **professional maintenance**.

Organized by:

What will you find at EXPOFIMER 2023?

As an international reference at a technical level within the renewable sector, EXPOFIMER has worked on an offer focused on the latest products, services and procedures in the **Asset Management sector**, as well as forums for discussion and exchange of knowledge where different models are discussed and quality is promoted throughout the value chain.

Above all, we want the fair to be a **meeting point**, a place of confluence for the sector where **entrepreneurs, developers, installers, banks, investors, managers, associated companies, etc.** coincide and contribute to enrich communication and the exchange of ideas that allow to meet and improve the requirements of this sector, which currently shows an enormous relevance and expectation of growth for the economy.

A New Space at Feria de Zaragoza

The second edition of EXPOFIMER will take place at the Zaragoza Exhibition Center (Pavilion 5), a unique space that will allow the event to grow by **tripling** its range of equipment and services.

With this change, EXPOFIMER, the only European Fair specialized in renewable energy O&M, takes a leap in quality in every sense, as it allows both exhibitors and visitors to greatly improve the experience of the fair.

Why **Feria de Zaragoza**?

- Privileged location
- Located in the center of the most developed axes of Spain. Within a radius of 350 kilometers, it gathers 60% of the Spanish population and 80% of the national GDP
- Good communications by air, freeway network and rail, including the AVE high-speed train
- Dynamic city, full of attractions for its visitors
- Complete network of hotels of all categories

New technical conferences and workshops

As we did in the last edition, in parallel to EXPOFIMER 2023, the only Renewable Asset Management Fair in Europe, **simultaneous technical sessions and workshops** will be held, with the aim of deepening the knowledge of solutions and products to optimize the operation of plants and achieve the expected technical and economic results, as well as promoting quality as a hallmark to consolidate the viability of renewable facilities.

These sessions will deal with the **latest developments** in the evolution of the renewables market and their impact on maintenance services (direct and complementary), contractual modalities, training, advanced tools (digitalization, predictive, etc.), new architectures (storage, repowering, renovation), secondary markets, recycling of components or health and safety in installations.

To this end, EXPOFIMER 2023 is launching **a public call for papers to show a more complete vision** of the different services and markets, as well as future development forecasts.

Summaries should be less than 500 words.

- Deadline: **October 31, 2022**
- Selection of proposals: **November 30, 2022**
- Publication of the program: **December 15, 2022**
